Data Flow Diagrams:

A Data Flow Diagram (DFD) is a visual representation of the flow of information within a system. It shows how data enters the system, how it is processed, analyzed, and transformed into useful information, and how the final results are presented to users.

For our project, the DFD represents the flow of dietary and lifestyle data from the dataset through data preparation and analysis to Tableau visualizations and dashboards.

The diagram helps to understand how raw lifestyle and dietary data is collected, cleaned, analyzed, and converted into meaningful insights about breakfast consumption, eating-out frequency, cooking habits, food choices, and other lifestyle patterns.

User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
-----------	-------------------------------	-------------------	-------------------	---------------------	----------	---------

End User	Dashboard	US-1	As a user, I can view the healthy lifestyle and dietary habits dashboard.	Dashboard loads successfully with relevant visualizations.	High	Sprint-1
End User	Breakfast Analysis	US-2	As a user, I can view breakfast consumption patterns.	Breakfast consumption is displayed through charts/KPIs.	High	Sprint-1
End User	Eating-Out Analysis	US-3	As a user, I can view eating-out frequency and related patterns.	Eating-out frequency is displayed accurately.	High	Sprint-1
End User	Cooking Analysis	US-4	As a user, I can analyze cooking frequency and food preparation habits.	Cooking frequency is represented through suitable visualizations.	Medium	Sprint-1
End User	Food Habits	US-5	As a user, I can explore different dietary and food-choice patterns.	Relevant food and dietary patterns are displayed correctly.	High	Sprint-2
End User	Data Filtering	US-6	As a user, I can filter the dashboard based on available categories.	Selected filters update the visualizations correctly.	High	Sprint-2
End User	KPI Summary	US-7	As a user, I can view important lifestyle and dietary KPIs.	KPI cards display accurate summary information.	Medium	Sprint-2
End User	Comparison	US-8	As a user, I can compare different dietary and lifestyle patterns.	Comparison charts display the selected categories correctly.	Medium	Sprint-2
End User	Insights	US-9	As a user, I can identify important	Dashboard provides clear and	High	Sprint-3

			trends and patterns from the dashboard.	understandable insights.		
Project Team	Data Management	US-10	As a team member, I can prepare and organize the dietary and lifestyle dataset.	Dataset is cleaned and ready for analysis.	High	Sprint-1
Project Team	Visualization	US-11	As a team member, I can create interactive Tableau visualizations.	Charts and dashboards are created successfully.	High	Sprint-2
Project Team	Dashboard Management	Dashboard Management	As a team member, I can update the dashboard based on analysis requirements.	Updated visualizations are reflected correctly.	Medium	Sprint-3
