

PROJECT REPORT

Healthy Lifestyle and Dietary Habits Analysis using Tableau

1. INTRODUCTION

1.1 Project Overview

Introduce the project, the dataset, and what you are analyzing using Tableau.

1.2 Purpose

Explain why the project is needed — to understand people's dietary and lifestyle habits and identify useful patterns through data visualization.

2. IDEATION PHASE

2.1 Problem Statement

Explain the main problem:

- People may not clearly understand their dietary habits.
- Breakfast consumption, eating-out frequency, cooking habits, etc. can affect lifestyle.
- Raw data is difficult to understand.
- A visualization-based solution can make these patterns easier to understand.

2.2 Empathy Map Canvas

Use the **Empathy Map** you prepared.

Include:

- Think & Feel
- See
- Hear
- Say & Do
- Pain
- Gain

2.3 Brainstorming

Include the **Brainstorming – Idea Generation – Prioritization Template**.

Show:

- Step 1: Team Gathering & Problem Selection
 - Step 2: Brainstorming, Idea Listing & Grouping
 - Step 3: Idea Prioritization
-

3. REQUIREMENT ANALYSIS

3.1 Customer Journey Map

Include your **Customer Journey Map** diagram.

Explain how the user goes from:

Understanding lifestyle → Exploring dietary habits → Viewing data → Identifying patterns → Making better decisions

3.2 Solution Requirement

Include:

Functional Requirements

- Data loading
- Data filtering
- Data visualization
- Dashboard interaction
- KPI display
- Story creation

Non-Functional Requirements

- Usability
- Security
- Reliability
- Performance
- Availability
- Scalability

3.3 Data Flow Diagram

Include your **DFD** showing how:

Dataset → Data Preparation → Tableau → Visualizations → Dashboard/Story → User

3.4 Technology Stack

Include your **Technology Stack** diagram and **Table 1 & Table 2**.

For example:

Component	Technology
Data Source	CSV Dataset
Data Processing	Tableau
Visualization	Tableau
Dashboard	Tableau
Story	Tableau
Storage	Local/Cloud Storage
Development	Tableau Public/Desktop

4. PROJECT DESIGN

4.1 Problem Solution Fit

Include your **Problem–Solution Fit Template**.

Explain how your Tableau solution addresses the identified customer problems.

4.2 Proposed Solution

Describe your proposed solution:

The proposed solution is an interactive Tableau-based data visualization system that analyzes healthy lifestyle and dietary habits. It provides dashboards, filters, KPIs and visualizations that help users understand patterns such as breakfast consumption, eating-out frequency, cooking frequency and other lifestyle-related factors.

4.3 Solution Architecture

Include your **Architecture diagram**.

Show the flow:

User → Tableau Interface → Data Processing → Dataset → Visualizations → Dashboard/Story

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

Include:

- Product Backlog
- Functional Requirements/Epics
- User Stories
- Story Points
- Sprint Planning
- Sprint Schedule
- Velocity
- Burndown Chart

For your project, you can divide work into sprints such as:

Sprint 1: Data Collection & Data Preparation

Sprint 2: Data Visualization

Sprint 3: Dashboard & Story Development

6. FUNCTIONAL AND PERFORMANCE TESTING

6.1 Performance Testing

Include the table you prepared:

1. Data Rendered
2. Data Preprocessing
3. Utilization of Filters
4. Calculation Fields Used
5. Dashboard Design
6. Story Design

Paste the relevant **Tableau screenshots** beside each item.

7. RESULTS

7.1 Output Screenshots

This is where you show the **final Tableau outputs**.

For example:

Figure 1: KPI Summary Dashboard

Figure 2: Breakfast Consumption Analysis

Figure 3: Eating Out vs Cooking Frequency

Figure 4: Lifestyle/Dietary Habit Visualization

Figure 5: Final Tableau Dashboard

Figure 6: Tableau Story

Add a short explanation below each screenshot.

8. ADVANTAGES & DISADVANTAGES

Advantages

- Easy-to-understand visualizations
- Interactive filters
- Helps identify lifestyle patterns
- Provides quick insights
- Makes complex data easier to interpret
- Supports data-driven decision making

Disadvantages

- Depends on the quality of the dataset
 - Limited to the variables available in the dataset
 - Tableau knowledge is required for modifying dashboards
 - Results may not represent every individual
-

9. CONCLUSION

Summarize what you achieved.

For example:

The project successfully analyzed healthy lifestyle and dietary habits using Tableau. The developed visualizations and dashboards helped identify patterns in breakfast consumption, eating-out habits, cooking frequency and other lifestyle factors. The project demonstrates how data visualization can convert raw data into meaningful and easily understandable insights.

10. FUTURE SCOPE

You can write:

- Add more health and lifestyle datasets.
 - Include real-time data collection.
 - Develop predictive analytics.
 - Use Machine Learning to predict lifestyle-related outcomes.
 - Add personalized recommendations.
 - Develop a web or mobile application.
 - Integrate more interactive dashboards.
 - Include additional demographic and dietary factors.
-

11. APPENDIX

Source Code (if any)

Add your code here, if your project contains any.

Dataset Link

Add the link from where you obtained your dataset.

GitHub & Project Demo Link

Add:

- GitHub repository link
 - Tableau Public link
 - Project demonstration link, if available.
-
