

Project Design Phase Solution Architecture

Date	04 July 2026
Team ID	
Project Name	Comprehensive Analysis Dietary Strategies with Tableau:A college food choices case study
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture bridges the gap between the college food choices problem and the Tableau-based analytical solution. It transforms raw student data into meaningful insights through data preparation, analysis, visualization, interactive dashboards, and a Tableau Story.

Its goals are to:

- Analyze student dietary and lifestyle patterns.
- Transform and prepare the dataset for analysis.
- Create meaningful visualizations and dashboards using Tableau.
- Identify important patterns and relationships in food choices and health-related factors.
- Present insights and dietary strategies through an interactive Tableau Story.
- Support data-driven decision-making through the final analytical solution.

Example - Solution Architecture Dia
